Introduction

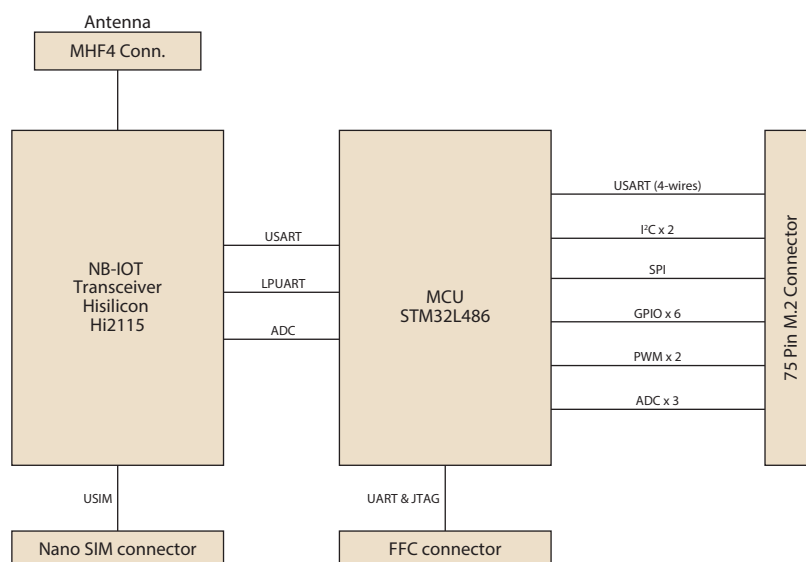

WISE-1570 is M2.COM standardized IoT Sensor Node integrated with ARM Cortex-M4 Processor and NB-IoT or LTE-M technologies. 3GPP (3rd Generation Partnership Project) has defined NB-IoT (CAT-NB1) in release 14th. The purpose of new standard is to fulfill the demand of IoT growth. NB-IoT focus on LPWA market with wide coverage, more connections, lower data rate and better power consumption. Telecoms will be easier to build NB-IoT network with existing LTE infrastructure. This new standard expedites the penetrations of internet-of-thing in China, Asia, Europe and United States.

Advantech WISE-1570 also provides multi-interfaces for sensor and I/O control. With Arm mbed embedded microprocessor operating system and add-on software stacks, it's convenient to support IoT communication protocols including LWM2M, CoAP and MQTT-SN to NB-IoT service network offered by telecom companies. Data can be quickly and easily acquired and transformed into a different format to communicate with ARM Pelion Cloud or other cloud services. Developer can build their application backbone faster and focus on their applications, value-added services.
