Introduction

The M-7017mC-16 is a 16-channel current input module that is specifically designed to measure current only. Its user-friendly design saves both time and effort when measuring current thanks to built-in resistors, meaning that you can now measure current directly without needing to add an external resistor. The module also provides 4 kV ESD protection and 110 VDC overvoltage protection for the current input, and features 3000 VDC intra-module isolation and open wire detection for 4 ~ 20 mA input. The sampling rate on the M-7017mC-16 is adjustable, meaning that either fast mode or normal mode can be selected. The M-7017mC-16 contains a data logger that can be used to record the current input from all 16 channels, including date and time stamps, and is able to store up to 100,000 downloadable records.
