

CANopen Slave/DCON Master Gateway

I-7231D

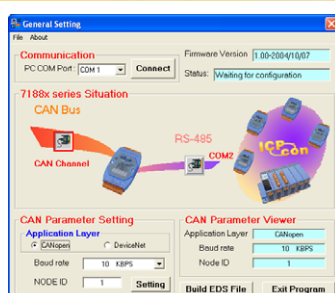

Dimensions

The I-7231D is specially designed for the slave device of CANopen protocol. It follows the CANopen Spec DS-301 V4.02 and DSP-401 V2.1, and supplies many features for users, such as dynamic PDO, EMCY object, error output value, SYNC cyclic and acyclic ... etc. The I-7231D supports up to 15 DCON modules for I/O expansion and suits with a lot of ICP DAS DI/AI/DO/AO modules. User can choose DI/DO/AI/AO modules of I-7K/I-87K series to fit the customized practice applications. In addition, we also provide I-7231D Utility to allow users to create the EDS file dynamically.

Features

- NMT: Slave
- Error Control: Node Guarding/Heartbeat Producer
- No. of SDOs: 1 Server, 0 Client
- No. of PDOs: default 4 TxPDO and RxPDO
- PDO Modes: Event Triggered, Remotely requested, Cyclic and Acyclic SYNC
- Emergency Message: available
- CANopen Version: DS-301 v4.02
- Device Profile: DSP-401 v2.1

Utility Features

I-7231D main unit can connect to the DCON(I-7K/I-87K) IO modules to create a customized CANopen slave device and application. In order to allow user to easy apply the device on the network, ICP DAS also provides the I-7231D Utility tool to configure the IO connection path, assembly and application objects information and create the EDS file of the device.
